Background

Seattle Children’s is a trusted community partner, dedicated to fostering healthy children, families, and communities. They are committed to providing positive, accurate, and culturally relevant messages surrounding nutrition and wellness.

Seattle Children’s community outreach staff receives regular requests for nutrition information by the community, and the frequency of these requests, coupled with the limited availability of their registered dietitians, has resulted in the identification of a service gap.

Therefore an additional model of service delivery is needed to meet the needs of Seattle Children’s community outreach staff as well as the nutrition needs of the increasingly diverse community served.

Solution

In response to the identified need, the aim of this project was to develop a positive, clear nutrition education lesson that could be delivered by trained community staff and volunteers at Seattle Children’s community events.

Project Objectives

• Identify the nutritional needs of the intended audience and determine how best to deliver this information.

• Develop a nutrition education lesson that can be effectively delivered by non-nutrition professionals at community events.

• Implement a train-the-trainer nutrition education package for Seattle Children’s staff and volunteers.

• Develop a process to evaluate the effectiveness.

• Provide stakeholders with future recommendations

The Process

1. Needs assessment: stakeholders who work closely with the identified population provided information regarding audience characteristics and common nutrition related concerns.

2. Research best practices: Behavioral theories, public health communication strategies, and social marketing techniques were all utilized in the development of the intervention.

3. Lesson creation: The lesson was developed while simultaneously researching best practices and acquiring feedback from stakeholders. Feedback was incorporated into the revised lesson accordingly.

4. Training: Community outreach staff were trained to deliver the lesson during a group meeting.

5. Evaluation: A semi-structured interview protocol and evaluation plan was developed. The evaluation plan will be utilized at Seattle Children’s Bellevue Health Fair, providing stakeholders with recommendations for modifications and future directions.

Nutrition Education Lesson - Child Version

Energize with Food!

Choose Your Fuel

Step 1: Choose a snack to fuel you. Choose 2 to a 3 food groups for energy.

Choose from the following groups:

- Vegetables
- Fruit
- Grains
- Proteins
- Dairy

Timing Matters!

A regular daily snack and meal schedule helps kids avoid hunger, give their energy, and make better food choices. Kids can better manage hunger throughout the day (and night) when they eat meals and snacks regularly and when they are full.

Parents Choose and Children Eat!

Make a healthy, balanced snack of fruits, vegetables, or whole grains that is high in fiber and low in sugar, fat, and sodium. Fruits and vegetables can be eaten alone or with cheese or nuts, and they are full of vitamins and other nutrients that kids need. If your child doesn’t eat all the food you pack, it’s okay. They can choose what to eat and how much they want to eat. Plus, no snacks are a bad thing. They can go back for more if they need it.

Add Variety!

Give your child a variety of snacks throughout the day, and remember what they like. Each snack you make that your child won’t eat is a chance to practice healthy habits.

Final Product

Given the results of the needs assessment, the nutrition education lesson focused on the importance of planned snacks within an overall healthy diet. Two versions of the nutrition education lesson were developed; one for children and one for adolescents. The lesson includes a presenter’s manual, learning activities, and handouts.
